Ready to enter the **Augmented Reality** universe?

Introducing you

NOZOMI

Nozomi is the culmination of our team's efforts, represented as the elegant, sophisticated cyborg heroine named **Hinata** in a godforsaken world. This CNFT project focuses on incorporating oriental Japanese culture with the daring antiques of cyberpunk excellence, merging both tradition and futurism into its theme, resulting in a tasteful juxtaposition.

のぞみ, romanized as Nozomi, translates to the word "hope" in English. This closely ties in with our project's theme of a heroine in a dark cyberpunk world. In a world of darkness, a small speckle of light represents humanity's hope, and that is exactly what Hinata represents

"Quality, not quantity" acts as the driving force behind our team. This project focuses heavily on creating high quality 3D art with realistic details on the Cardano Blockchain. With this in mind, we are proud to announce that due to extra efforts by the tech team, **the unique ability to view Hinata in her Augmented Reality form is designed to allow owners to bring their Hinata to their world and view it up close, a new innovation in Cardano.**

This is
Hinata

and this is
HER
story

Set in the cyberpunk society of Jipun, this CNFT collection depicts the many lives of Hinata, a cyborg girl who has existed to shield the residents of Yutopia where only the nation's most wealthy and powerful citizens reside. Like Hinata, thousands of cyborgs were built by the government to protect the Yutopian residents from the rebellion started by the outcast citizens of Jipun who live outside the territories far away from the elite, in unimaginable conditions. For decades, the rebels tried to fight for equality with the Yutopians but to no avail.

**Initially Hinata was owned by the government,
But eventually her AI outgrew its programmed security.
Realizing the harsh reality,
She ran away.**

Hinata's soul remained unchanged throughout the millennia, though components of her mechanical anatomy have been constantly switched out with new parts and various other upgradables throughout the years. Darkness was ever the cover of scum and monster. Hinata seized that cloak for herself, and now there's something new to fear in the shadows of neon-lit streets. She fights where bright signs don't flash, against monsters, in hope to seek justice for those unfairly treated.

Thousands of years have passed since her rebirth in this undying prison of flesh and wire. This CNFT collection follows her through generations as she swaps out her lives, parts, and identity.

In a world where dark beings are no longer required to lurk, this cyber-enhanced super soldier is — ironically — humanity's **final bastion of hope.**

Hinata's
journey
starts
here.

AR meets CNFT

YOUR NFT CAN NOW
be next to you

NFT are just “pictures”. We are here to end this norm. Our Augmented Reality feature brings your NFT to the real world and views it up close; being in the same frame with your **Hinata NFT** and displaying it in front of you from the comfort of your mobile device.

The AR technology allows owners to project their Hinata NFT in front of them wherever they are.

When projected, you can walk towards your Hinata NFT to get a close view and take it for a spin with a **360-degree view**.

Your PFP NFT is no longer “legless” anymore when viewed with our AR feature. When projected, it stands in front of you just like an actual human.

Nozomi is truly all about bringing NFTs one step closer towards its owner.

Explore more about our AR feature on Nozomi official website
