- [[xerox star-interface]]
  - "The Star user interface adheres rigorously to a small set of principles designed to make the system seem friendly by simplifying the human-machine interface."
  - "We have learned from Star the importance of formulating the fundamental concepts (the user's conceptual model) before software is written, rather than tacking on a user interface afterward." - Designing the Xerox "Star" User Interface, Byte, issue 4, 1982

GUI

← each petal is a link
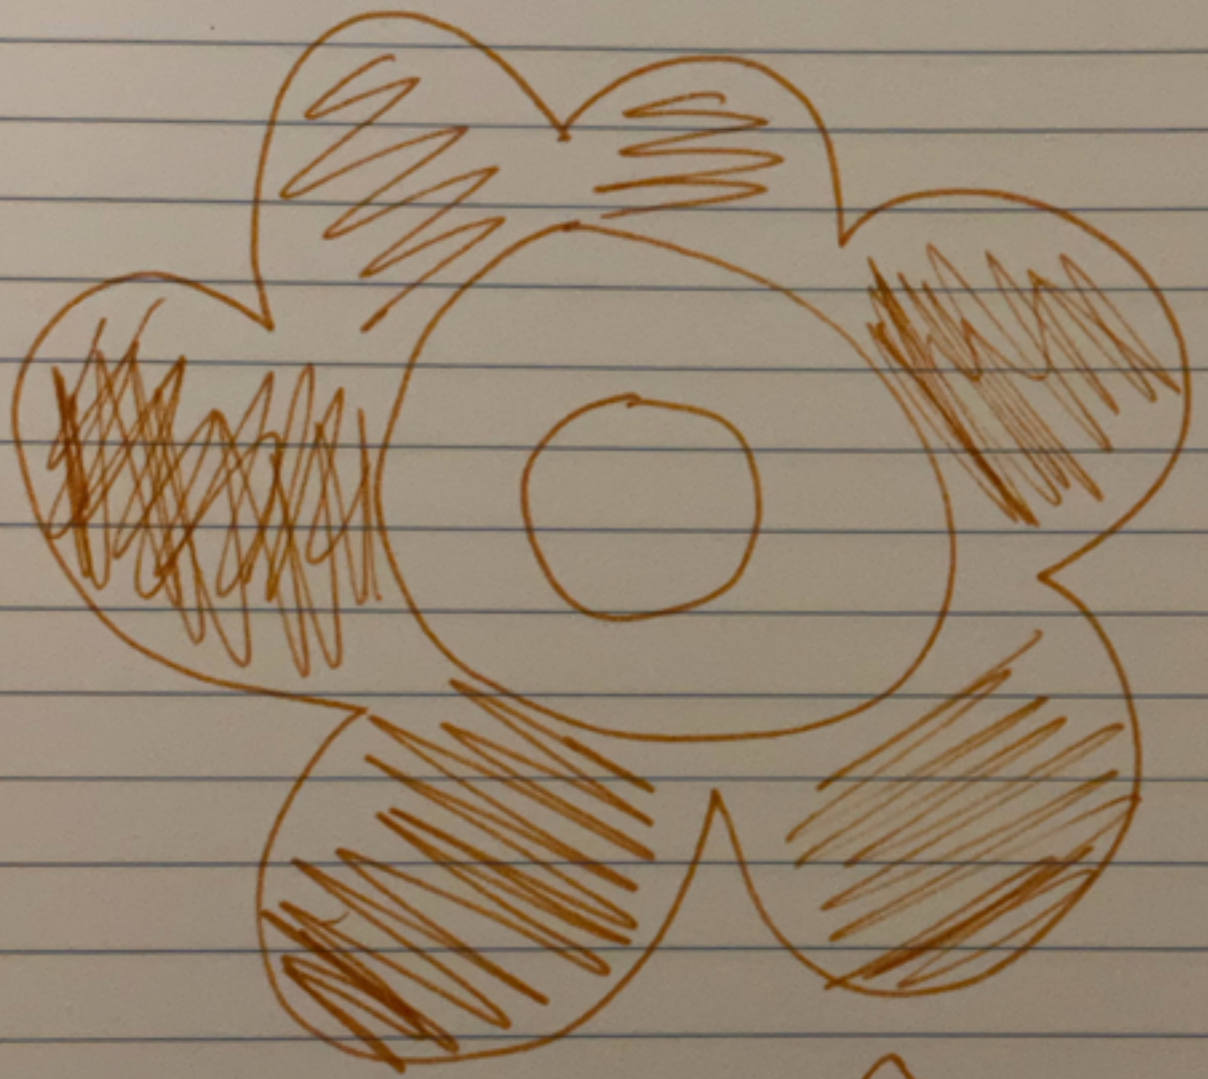

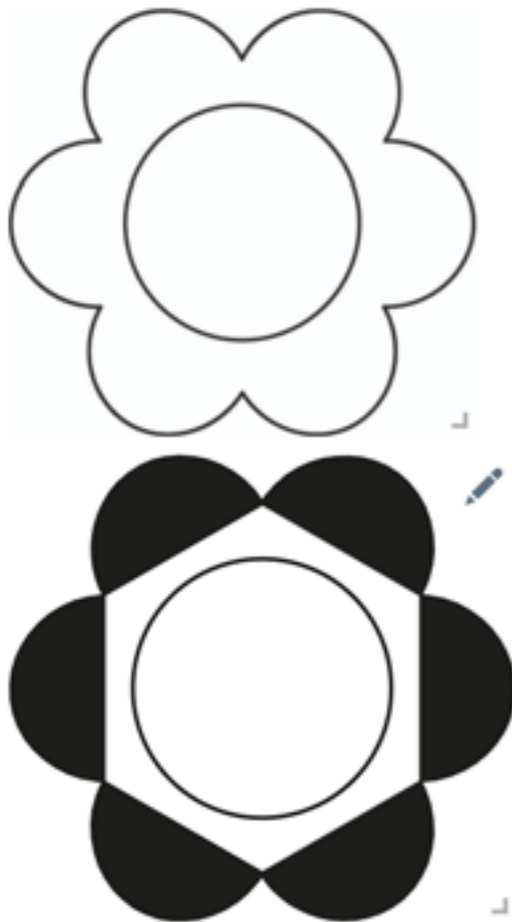

**random idea I had b4 i went to sleep**

flower development

- [[October 12th, 2021]]
- making this flower took all mjdcjdncjnefjc DAY so slightly behind on where I wanted to be with project work...

    - started with jpeg but I needed each petal to be its own object for [[GUI]] point and click feature
   -
        -

    - initial sketches taken into blender but this is when I realised separating each petal needs to be done in illustrator first
   -
        -

- some mathematical developments making petal even etc (there was probably an easier way to do it all)

- FINALLY [[sculpted]] and modelled in [[blender]] as you can see each petal is a separate clickable object

- which comes out as a pretty gltf here...
